

Ways to Prevent Noise Pollution

Noise pollution can affect you physically as well as mentally. You may become deaf and it can cause fatigue. While on the other side, it can also cause you some psychological changes. As the world turns more forward-thinking, noise goes up. The most common type of noise pollution at the present is from transportation, mainly automobiles, motorcycles, and aeroplanes.

In the modern era of developments and innovations, noise pollution is always on the rise. So it becomes important to adopt ways which can help you prevent noise pollution. Some of the ways that can help you prevent noise pollution are given below:

- Make your rooms – especially those ones where piano, guitar, or any type of music is played – sound proof so that sounds of these devices don't cross the room and cause any noise pollution in the outside. This can be done easily with curtains, carpets, and by closing windows and doors while playing on these musical instruments.
- Make use of fabric windows instead of plastic or wooden shades.
- Beep your car horn only when it is really needed.
- Switch off your radio, TV, or music player when you are not listening to it for a long time.
- Barking by dogs also causes noise pollution. Training them properly can prevent this kind of noise.
- Use your calm voice while conversing with others. Don't shout or scream.
- Keep the nature clean and green by planting more trees and plants around your living area. Plants and trees help in sound reduction by absorbing it while also keeping the air clean.
- Keep the sound volume of music played on computers and speakers low. It can cause damage to your as well as others' ears.
- Do your dishes or hammering, or some other thing which creates a lot of noise, on a rubber mat which can reduce the generation of noise pollution.
- Large usage of DJ systems at public functions also causes noise pollution. So cutting down on it can also help in reducing noise pollution.

Some of the causes described above may not cause noise pollution individually; but as a whole, it causes a lot of damage. So for the betterment of you, your family, friends and relatives, and all of those around you, try not to be a part of those things that cause noise pollution. Follow the above methods that will help reducing the noise pollution and will make you a part of a noble cause. It is very important to take strict steps to get rid of noise pollution.

Clase Nº 13- Texto de Lectura: **Ways to Prevent
Noise Pollution**

ACTIVIDADES

A- Aproximación al texto y lectura general

1. Observa la organización general del texto e imagen
2. Lee el título.
3. Observa tipografía, palabras transparentes y conocidas, números.
4. Después de una relectura, ¿puedes predecir en términos generales el contenido del texto?
5. ¿Puedes decir de qué tipo de texto se trata?

B- Revisión Gramatical: el imperativo y verbos modales

B.1- Completa las ideas con la información teórica de estos temas.

- 1- El **modo imperativo en inglés**, en forma afirmativa, se reconoce en un texto
....., y en forma negativa
.....
- 2- El **modo imperativo** se utiliza para.....
- 3- Los **verbos modales en inglés** son:
....., y siempre van seguidos de
- 4- La **forma negativa de un verbo modal** se reconoce.....

B.2- Transcribe dos oraciones en modo imperativo del texto y una que contenga un verbo modal. Tradúcelas al español.

C- Lecto-Comprensión

C.1- Responde las preguntas o realiza las actividades a continuación con la información que brinda el texto de lectura

- 1- ¿Cómo puede afectar al hombre la contaminación sonora? ¿Cómo se incrementa el ruido? ¿Cuál es el tipo de contaminación sonora más común en la actualidad?

- 2- ¿Qué lleva a “adoptar” el incremento de este tipo de contaminación?
- 3- Traduce las formas que pueden prevenir la contaminación sonora.
- 4- ¿Qué sugiere el autor del texto en su conclusión? ¿Qué es importante hacer para eliminar la contaminación sonora, según el autor?
- 5- En no más de 5 renglones, da tu propia opinión respecto del contenido del texto
